A01	Kernel threads running correctly	3 points
A02	Correct process directory set up in setup_pagetables	1 point
B01	Processes run correctly with larger pageable pages. This requires proper implementation of swap in.	3 points
B02	Swap out correct -- processes run correctly when pageable pages is low	2 points
C01	Processes unable to write to kernel memory (except for Screen Address)	1 point
X01	Extra Credit: if all of the above work, then give point. If failed kernel safety test, but everything else works, [0.5 points]	1 point
