

# Introduction

## Outline

- Statistical Multiplexing
- Inter-Process Communication
- Network Architecture
- Performance Metrics
- Implementation Issues

Spring 2002

CS 461

1

---

---

---

---

---

---

---

---

# Building Blocks

- Nodes: PC, special-purpose hardware...
  - hosts
  - switches
- Links: coax cable, optical fiber...
  - point-to-point
  - multiple access

Spring 2002

CS 461

2

---

---

---

---

---

---

---

---

# Switched Networks

- A network can be defined recursively as...
  - two or more nodes connected by a link, or
  - two or more networks connected by a node

Spring 2002

CS 461

3

---

---

---

---

---

---

---

---

## Strategies

- Circuit switching: carry bit streams
  - original telephone network
- Packet switching: store-and-forward messages
  - Internet

Spring 2002

CS 461

4

---

---

---

---

---

---

---

---

## Addressing and Routing

- Address: byte-string that identifies a node
  - usually unique
- Routing: process of forwarding messages to the destination node based on its address
- Types of addresses
  - unicast: node-specific
  - broadcast: all nodes on the network
  - multicast: some subset of nodes on the network

Spring 2002

CS 461

5

---

---

---

---

---

---

---

---

## Multiplexing

- Time-Division Multiplexing (TDM)
- Frequency-Division Multiplexing (FDM)

Spring 2002

CS 461

6

---

---

---

---

---

---

---

---

## Statistical Multiplexing

- On-demand time-division
- Schedule link on a *per-packet* basis
- Packets from different sources interleaved on link
- Buffer packets that are *contending* for the link
- Buffer (queue) overflow is called *congestion*

Spring 2002

CS 461

7

---

---

---

---

---

---

---

---

## Inter-Process Communication

- Turn host-to-host connectivity into process-to-process communication.
- Fill gap between what applications expect and what the underlying technology provides.

Spring 2002

CS 461

8

---

---

---

---

---

---

---

---

## IPC Abstractions

- Request/Reply
  - distributed file systems
  - digital libraries (web)
- Stream-Based
  - video: sequence of frames
    - 1/4 NTSC = 352x240 pixels
    - $(352 \times 240 \times 24) / 8 = 247.5\text{KB}$
    - 30 fps = 7500KBps = 60Mbps
  - video applications
    - on-demand video
    - video conferencing

Spring 2002

CS 461

9

---

---

---

---

---

---

---

---

## What Goes Wrong in the Network?

- Bit-level errors (electrical interference)
- Packet-level errors (congestion)
- Link and node failures
  
- Packets are delayed
- Packets are deliver out-of-order
- Third parties eavesdrop

Spring 2002

CS 461

10

---

---

---

---

---

---

---

---

## Layering

- Use abstractions to hide complexity
- Abstraction naturally lead to layering
- Alternative abstractions at each layer

Spring 2002

CS 461

11

---

---

---

---

---

---

---

---

## Protocols

- Building blocks of a network architecture
- Each protocol object has two different interfaces
  - *service interface*: operations on this protocol
  - *peer-to-peer interface*: messages exchanged with peer
- Term “protocol” is overloaded
  - specification of peer-to-peer interface
  - module that implements this interface

Spring 2002

CS 461

12

---

---

---

---

---

---

---

---

## Interfaces

Spring 2002

CS 461

13

---

---

---

---

---

---

---

---

## Protocol Machinery

- Protocol Graph
  - most peer-to-peer communication is indirect
  - peer-to-peer is direct only at hardware level

Spring 2002

14

---

---

---

---

---

---

---

---

## Machinery (cont)

- Multiplexing and Demultiplexing (demux key)
- Encapsulation (header/body)

Spring 2002

15

---

---

---

---

---

---

---

---

## Internet Architecture

- Defined by Internet Engineering Task Force (IETF)
- Hourglass Design
- Application vs Application Protocol (FTP, HTTP)

Spring 2002

CS 461

16

---

---

---

---

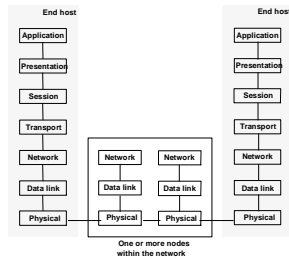

---

---

---

---

## ISO Architecture

Spring 2002

CS 461

17

---

---

---

---

---

---

---

---

## Performance Metrics

- **Bandwidth (throughput)**
  - data transmitted per time unit
  - link versus end-to-end
  - notation
    - KB =  $2^{10}$  bytes
    - Mbps =  $10^6$  bits per second
- **Latency (delay)**
  - time to send message from point A to point B
  - one-way versus round-trip time (RTT)
  - components
    - Latency = Propagation + Transmit + Queue
    - Propagation = Distance / c
    - Transmit = Size / Bandwidth

Spring 2002

CS 461

18

---

---

---

---

---

---

---

---

## Bandwidth versus Latency

- Relative importance
  - 1-byte: 1ms vs 100ms dominates 1Mbps vs 100Mbps
  - 25MB: 1Mbps vs 100Mbps dominates 1ms vs 100ms
- Infinite bandwidth
  - RTT dominates
    - $\text{Throughput} = \text{TransferSize} / \text{TransferTime}$
    - $\text{TransferTime} = \text{RTT} + 1/\text{Bandwidth} \times \text{TransferSize}$
  - 1-MB *file* to 1-Gbps link as 1-KB *packet* to 1-Mbps link

Spring 2002

CS 461

19

---

---

---

---

---

---

---

---

## Delay x Bandwidth Product

- Amount of data “in flight” or “in the pipe”
- Usually relative to RTT
- Example: 100ms x 45Mbps = 560KB

Spring 2002

CS 461

20

---

---

---

---

---

---

---

---

## Socket API

- Creating a socket
  - `int socket(int domain, int type, int protocol)`
    - `domain = PF_INET, PF_UNIX`
    - `type = SOCK_STREAM, SOCK_DGRAM, SOCK_RAW`
- Passive Open (on server)
  - `int bind(int socket, struct sockaddr *addr, int addr_len)`
  - `int listen(int socket, int backlog)`
  - `int accept(int socket, struct sockaddr *addr, int addr_len)`

Spring 2002

CS 461

21

---

---

---

---

---

---

---

---

## Sockets (cont)

- Active Open (on client)  
int connect(int socket, struct sockaddr \*addr,  
int addr\_len)
- Sending/Receiving Messages  
int send(int socket, char \*msg, int mlen, int flags)  
int recv(int socket, char \*buf, int blen, int flags)

Spring 2002

CS 461

22

---

---

---

---

---

---

---

---

## Protocol-to-Protocol Interface

- Configure multiple layers
  - static versus extensible
- Process Model
  - avoid context switches
- Buffer Model
  - avoid data copies

Spring 2002

CS 461

23
