

3D Modeling

COS 426

Syllabus

I. Image processing

II. Modeling

III. Rendering

IV. Animation

Image Processing
(Rusty Coleman, CS426, Fall99)

Rendering
(Michael Bostock, CS426, Fall99)

Modeling
(Dennis Zorin, CalTech)

Animation
(Angel, Plate 1)

What is 3D Modeling?

- Topics in computer graphics
 - Imaging = *representing 2D images*
 - Rendering = *constructing 2D images from 3D models*
 - Modeling = *representing 3D objects*
 - Animation = *simulating changes over time*

Modeling

- How do we ...
 - Represent 3D objects in a computer?
 - Acquire computer representations of 3D objects?
 - Manipulate computer representations of 3D objects?

3D Object Representations

How can this object be represented in a computer?

3D Object Representations

How about this one?

3D Object Representations

3D Object Representations

This one?

3D Object Representations

- Points
 - Range image
 - Point cloud
- Surfaces
 - Polygonal mesh
 - Subdivision
 - Parametric
 - Implicit
- Solids
 - Voxels
 - BSP tree
 - CSG
 - Sweep
- High-level structures
 - Scene graph
 - Application specific

Equivalence of Representations

- Thesis:
 - Each representation has enough expressive power to model the shape of any geometric object
 - It is possible to perform all geometric operations with any fundamental representation
- Analogous to Turing-equivalence
 - Computers and programming languages are Turing-equivalent, but each has its benefits...

Why Different Representations?

- Efficiency for different tasks
 - Acquisition
 - Rendering
 - Manipulation
 - Animation
 - Analysis

Data structures determine algorithms

Modeling Operations

- What can we do with a 3D object representation?
 - Edit
 - Transform
 - Smooth
 - Render
 - Animate
 - Morph
 - Compress
 - Transmit
 - Analyze
 - etc.

Sand et al.

3D Object Representations

- Desirable properties depend on intended use
 - Easy to acquire
 - Accurate
 - Concise
 - Intuitive editing
 - Efficient editing
 - Efficient display
 - Efficient intersections
 - Guaranteed validity
 - Guaranteed smoothness
 - etc.

Outline

- Points
 - Range image
 - Point cloud
- Surfaces
 - Polygonal mesh
 - Subdivision
 - Parametric
 - Implicit
- Solids
 - Voxels
 - BSP tree
 - CSG
 - Sweep
- High-level structures
 - Scene graph
 - Application specific

Range Image

- Set of 3D points mapping to pixels of depth image
 - Acquired from range scanner

Cyberware

Stanford

Range Image

Tessellation

Range Surface

Range Image

- Image: stores an intensity / color along each of a set of regularly-spaced rays in space
- **Range image:** stores a depth along each of a set of regularly-spaced rays in space
- Not a complete 3D description: does not store objects occluded (from some viewpoint)
- View-dependent scene description

Terminology

- Range images
- Range surfaces
- Depth images
- Depth maps
- Height fields
- 2½-D images
- Surface profiles
- xyz maps
- ...

Point Cloud

- Unstructured set of 3D point samples
 - Acquired from range finder, computer vision, etc

Polhemus

Microscribe-3D

Hoppe

Hoppe

Outline

- Points
 - Range image
 - Point cloud
- Surfaces
 - Polygonal mesh
 - Subdivision
 - Parametric
 - Implicit
- Solids
 - Voxels
 - BSP tree
 - CSG
 - Sweep
- High-level structures
 - Scene graph
 - Application specific

Polygonal Mesh

- Connected set of polygons (usually triangles)

Subdivision Surface

- Coarse mesh & subdivision rule
 - Define smooth surface as limit of sequence of refinements

Parametric Surface

- Tensor product spline patches
 - Each patch is parametric function
 - Careful constraints to maintain continuity

$$x = F_x(u,v)$$

$$y = F_y(u,v)$$

$$z = F_z(u,v)$$

FvDFH Figure 11.44

Implicit Surface

- Points satisfying: $F(x,y,z) = 0$

Polygonal Model

Implicit Model

Outline

- Points
 - Range image
 - Point cloud
- Surfaces
 - Polygonal mesh
 - Subdivision
 - Parametric
 - Implicit
- Solids
 - Voxels
 - BSP tree
 - CSG
 - Sweep
- High-level structures
 - Scene graph
 - Application specific

Voxels

- Uniform grid of volumetric samples
 - Acquired from CAT, MRI, etc.

FvDFH Figure 12.20

Stanford Graphics Laboratory

BSP Tree

- Binary space partition with solid cells labeled
 - Constructed from polygonal representations

Object

Binary Spatial Partition

Binary Tree

CSG

- Hierarchy of boolean set operations (union, difference, intersect) applied to simple shapes

FvDFH Figure 12.27

H&B Figure 9.9

Sweep

- Solid swept by curve along trajectory

Removal Path

Sweep Model

Outline

- Points
 - Range image
 - Point cloud
- Surfaces
 - Polygonal mesh
 - Subdivision
 - Parametric
 - Implicit
- Solids
 - Voxels
 - BSP tree
 - CSG
 - Sweep
- High-level structures
 - Scene graph
 - Application specific

Scene Graph

- Union of objects at leaf nodes

Bell Laboratories

Taxonomy of 3D Representations

Equivalence of Representations

- Thesis:
 - Each fundamental representation has sufficient expressive power to model the shape of any geometric object.
 - It is possible to perform all geometric operations with any fundamental representation!
- Analogous to Turing-Equivalence:
 - All computers today are turing-equivalent, but we still have many different processors

Computational Differences

- Efficiency
 - Combinatorial complexity (e.g. $O(n \log n)$)
 - Space/time trade-offs (e.g. z-buffer)
 - Numerical accuracy/stability (degree of polynomial)
- Simplicity
 - Ease of acquisition
 - Hardware acceleration
 - Software creation and maintenance
- Usability
 - Designer interface vs. computational engine

Upcoming Lectures

- Points
 - Range image
 - Point cloud
- Surfaces
 - Polygonal mesh
 - Subdivision
 - Parametric
 - Implicit
- Solids
 - Voxels
 - BSP tree
 - CSG
 - Sweep
- High-level structures
 - Scene graph
 - Application specific
