General | Syllabus | Coursework

General Information

Description: This course will study topics in computer graphics, covering methods in image processing, modeling, rendering, and

animation.

Prerequisites: The course is appropriate for students who have taken COS217 and COS226 (or the equivalent). Javascript will be used

as the main programming language.

Coursework: The grade will be based on four programming assignments (50%), two exams (25%), a final project (25%).

Textbook: Computer Graphics with OpenGL, 4th Ed., Hearn, Baker, and Carithers. Prentice Hall, 2010. ISBN: 978-0136053583.

Instructors: Professor Adam Finkelstein with TAs: Huiwen Chang, Nora Willett, and Linguang Zhang.

Students: requires PU login

Time/place: Lecture:

Tue & Thu 3-4:20pm, Friend 006

Precepts:

Wed 7:30-8:30pm, Friend 004 and/or 008.

Office Hours:

Mon 2-3pm (TA, location TBA)

Wed 11am-noon (Prof, CS Bldg 424)

Fri 11am-noon (TA, location TBA)

Questions: We will use Piazza to handle Q&A this semester. Please post your questions there instead of mailing the staff, if possible.

Coursework

- Exams (25%)
 - In class (3/10 and 4/28)
- Programming Assignments (50%)
 - Assignment #1: Image Processing (due 2/21)
 - Assignment #2: Modeling (due 3/6)
 - Assignment #3: Rendering (due 4/10)
 - Assignment #4: Animation (due 4/24)
- Final Project (25%)
 - Your choice! (due Dean's Date)

Programming Assignments

- When?
 - Roughly every 2-3 weeks
- Where?
 - Anywhere you want, e.g. home or clusters
- How?
 - Javascript
 - Some OpenGL (WebGL, GLSL)
- What?
 - Basic feature lists
 - Extra credit lists
 - Art contest

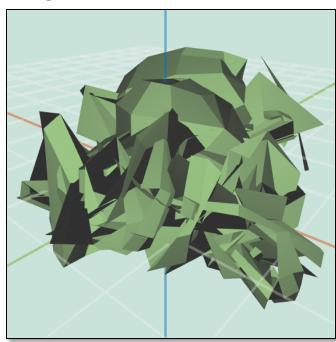

Art Contest

- Everybody should submit entries!
 - 1 point for submitting
 - 2 points for winning

Cool Images/Videos (Jimmy Zuber, CS 426, Spring 2014)

Bloopers Characters for web banner (Reed Tantiviramanond, CS 426, Spr15)

Collaboration Policy

Overview:

- You must write your own code
- You must reference your resources
- See policy on course web, and ask when in doubt

It's OK to ...

- Talk with other students about ideas, approaches, etc.
- Get ideas from information in books, wikipedia, etc.
- Use "support" code provided with our assignments

It's NOT OK to ...

- Show your code to another student (e.g. post on web)
- Look at code written by another student
- Leverage code acquired from other sources

Questions / Discussion

- Piazza (www.piazza.com)
 - View announcements
 - Post questions to the class
 - Answer other students questions
 - Set up for everyone enrolled as of today
 - Use this instead of email to instructors/TAs (can send private messages)

Precepts

- When and Where
 - Wed 7:30-8:30
 - Friend 004 just down the hall (with 008 as overflow)

- Attendance
 - Topics vary, so attend the ones that help you
 - Tomorrow: getting up to speed in Javascript

Overview

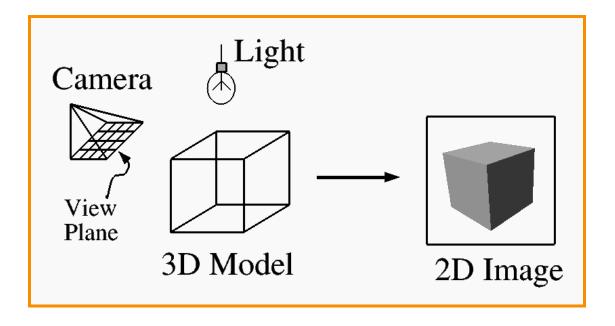

- Administative stuff
 - People, times, places, etc.
- > Syllabus
 - What will I learn in this course?
- Imaging
 - Getting started ...

Introduction

- What is computer graphics?
 - Imaging = representing 2D images
 - Modeling = representing 3D objects
 - Rendering = constructing 2D images from 3D models
 - Animation = *simulating changes over time*

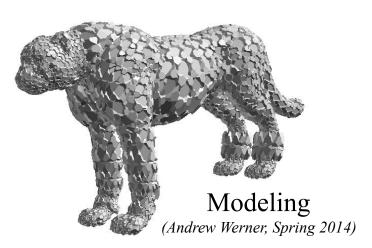

Syllabus

- I. Imaging
- II. Modeling
- III. Rendering
- IV. Animation

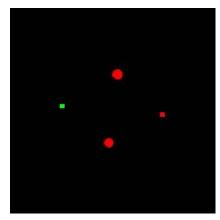

Image Processing
(Rusty Coleman, CS426, Fall99)

Rendering (David Paulk, CS426, Spr2015)

Animation (Riley Thomasson, Spring 2014)

Part I: Imaging

- **Image Basics**
 - Definition
 - Color models
- Image Representation
 - Sampling
 - Reconstruction
 - Quantization & Aliasing

(Ianf, Wikipedia)

- Image Processing
 - Filtering
 - Warping
 - Composition
 - Morphing

Image Composition (Michael Bostock, CS426, Fall99)

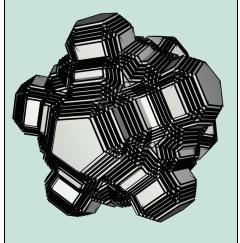

Part II: Modeling

- Representations of geometry
 - Curves: splines
 - Surfaces: meshes, splines, subdivision
 - Solids: voxels, CSG, BSP
- Procedural modeling
 - Sweeps
 - Fractals
 - Grammars

(John Whelchel, CS 426, Spr2015)

(Brendan Chou, Spring 2014)

Part III: Rendering

- 3D Rendering Pipeline
 - Modeling transformations
 - Viewing transformations
 - Hidden surface removal
 - Illumination, shading, and textures
 - Scan conversion, clipping
 - Hierarchical scene graphics
 - OpenGL
- Global illumination
 - Ray tracing
 - Radiosity

Global Illumination (Diana Liao, CS 426, Spr15)

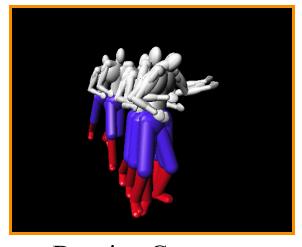

Pixel Shading (Final Fantasy, Square Pictures)

Part IV: Animation

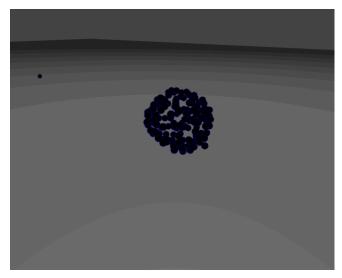

- Keyframing
 - Kinematics
 - Articulated figures
- Motion capture
 - Capture
 - Warping

Dancing Guy (Jon Beyer, CS426, Spr05)

Particle system
(Drew Wallac, Spring 2015)

- Dynamics
 - Physically-based simulations
 - Particle systems
- Behaviors
 - Planning, learning, etc.

- **→** Entertainment
 - Computer-aided design
- Scientific visualization
- Training
- Education
- E-commerce
- Computer art

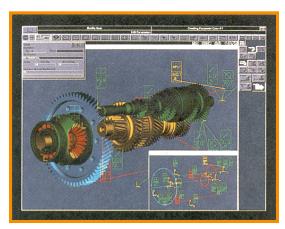

Geri's Game
(Pixar Animation Studios)

- Entertainment
- → Computer-aided design
- Scientific visualization
- Training
- Education
- E-commerce
- Computer art

Gear Shaft Design
(Intergraph Corporation)

Los Angeles Airport
(Bill Jepson, UCLA)

Boeing 777 Airplane
(Boeing Corporation)

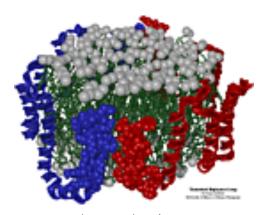

- Entertainment
- Computer-aided design
- → Scientific visualization
- Training
- Education
- E-commerce
- Computer art

Airflow Inside a Thunderstorm

(Bob Wilhelmson, University of Illinois at Urbana-Champaign)

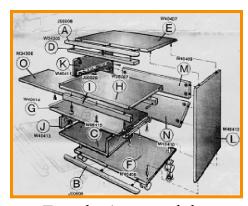

Apo A-1
(Theoretical Biophysics Group,
University of Illinois at Urbana-Champaign)

Visible Human
(National Library of Medicine)

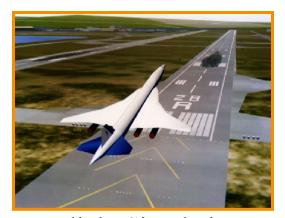

- Entertainment
- Computer-aided design
- Scientific visualization
- → Training
- Education
- E-commerce
- Computer art

Desk Assembly (Silicon Graphics, Inc.)

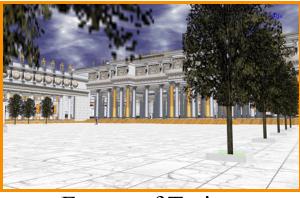

Driving Simulation
(Evans & Sutherland)

Flight Simulation (NASA)

- Entertainment
- Computer-aided design
- Scientific visualization
- Training
- → Education
- E-commerce
- Computer art

Forum of Trajan
(Bill Jepson, UCLA)

Human Skeleton (SGI)

- Entertainment
- Computer-aided design
- Scientific visualization
- Training
- Education
- **→** E-commerce
- Computer art

Interactive Kitchen Planner (Matsushita)

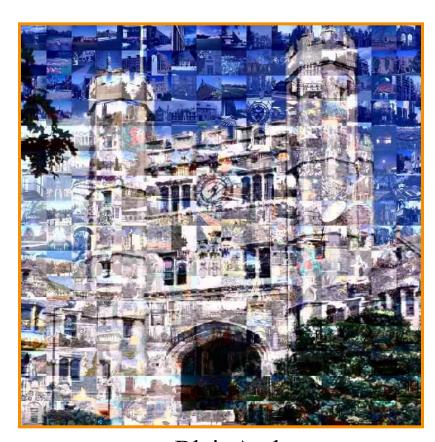

Virtual Phone Store

(Lucent Technologies)

- Entertainment
- Computer-aided design
- Scientific visualization
- Training
- Education
- E-commerce
- → Computer art

Blair Arch
(Marissa Range '98)

Overview

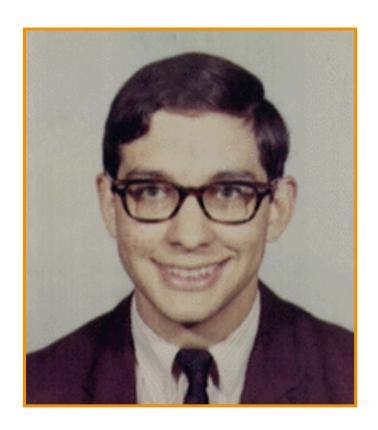

- Administrative stuff
 - People, times, places, etc.
- Syllabus
 - What will I learn in this course?
- > Imaging
 - Let's get started ...

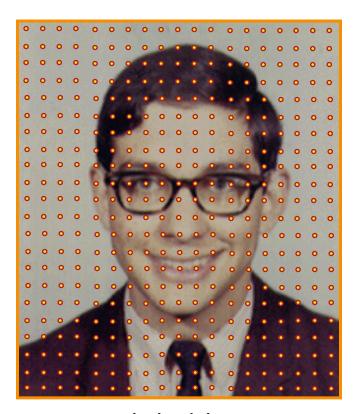

What is an Image?

What is an Image?

An image is a 2D rectilinear array of pixels

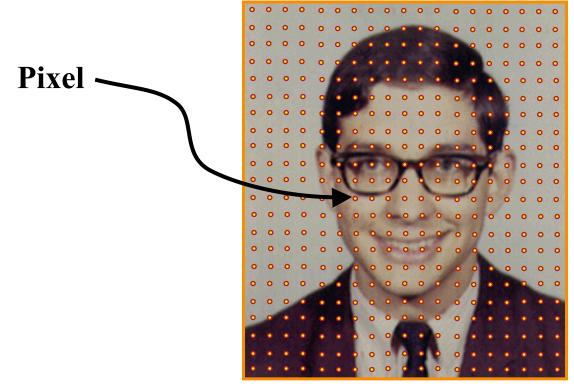

Digital image

What is a Pixel?

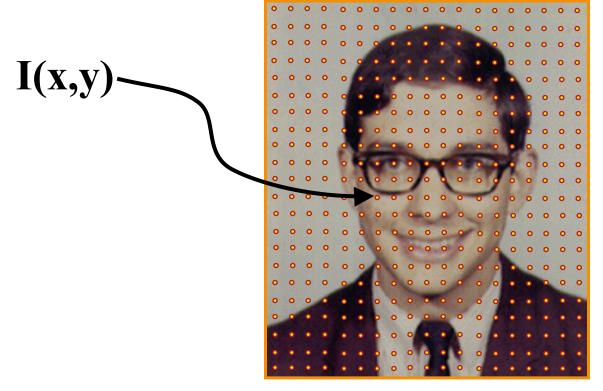

Digital image

What is a Pixel?

Sample of a function at a position

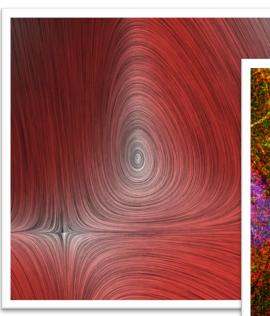

Digital image

What Function?

What Function?

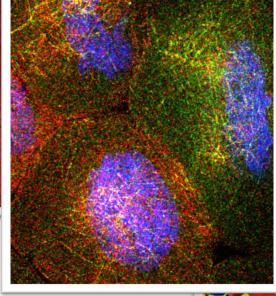

Could be any function ...

Mitchell A. Nahmias Paul R. Prucnal

Shawn C. Little Kristina S. Sinsimer Elizabeth R. Gavis

Michael Kosk

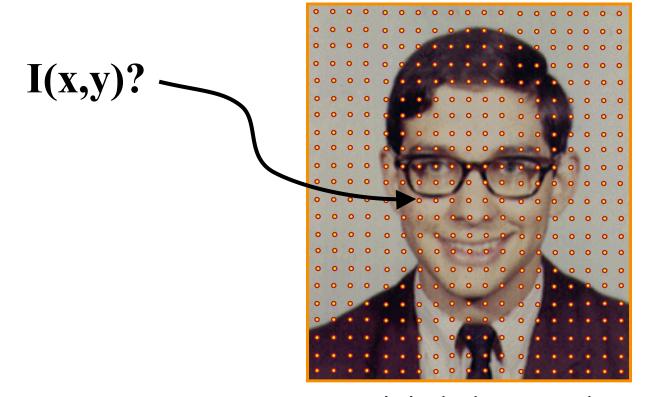

Art of Science (Friend Center hallway)

Mingzhai Sun Joshua Shaevitz

What Function?

What about photographic images?

Digital photograph

Plenoptic Function

Each pixel of a photographic image is a function of radiance arriving at a sensor.

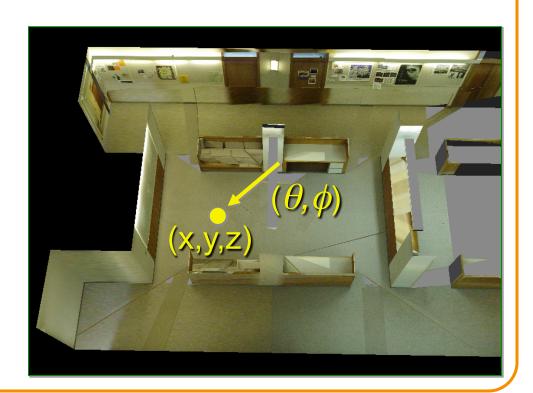

Plenoptic Function

The 7D plenoptic function $L(x,y,z,\theta,\phi,t,\lambda)$ describes the radiance arriving ...

- at any position (x,y,z),
- in any direction (θ, ϕ) ,
- \circ at any time (t),
- at any frequency (λ)

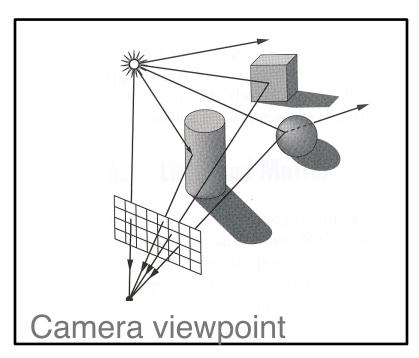

Photographic Images

An idealized photographic image contains a 2D array of samples of the 7D plenoptic function

- at a particular camera viewpoint,
- for 2D array of directions,
- at a certain time,
- at certain frequencies

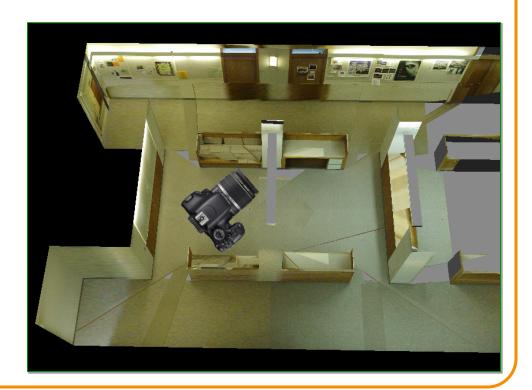

Photographic Images

In practice, can't measure plenoptic function directly

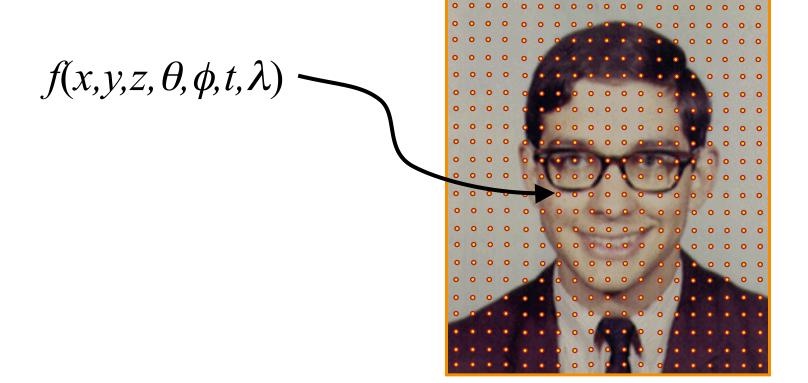

- Photoreceptors in eye
- Film in a traditional camera
- CCD cells in digital camera

Photographic Images

Photographic pixels as finite samples of the plenoptic function

Digital photograph

What Frequencies?

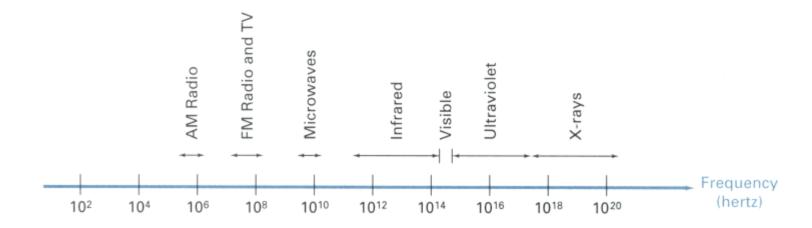

$$f(x,y,z,\theta,\phi,t,\lambda)$$

Electromagnetic Spectrum

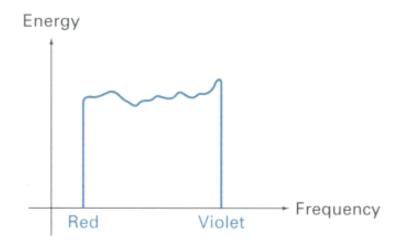

- Visible light frequencies range between ...
 - Red = $4.3 \times 10^{14} \text{ hertz } (700 \text{nm})$
 - \circ Violet = 7.5 x 10¹⁴ hertz (400nm)

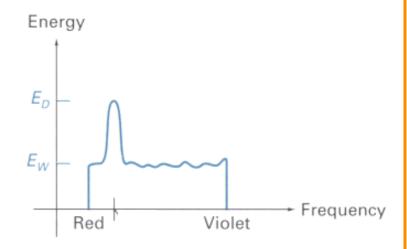

Color

- The color of light is characterized by its spectrum
 - Magnitude of energy at every visible frequency

White Light

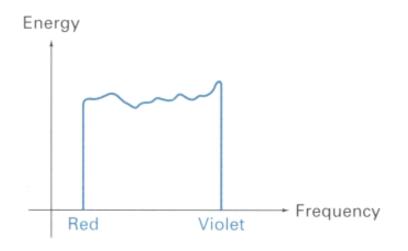

Orange Light

Color

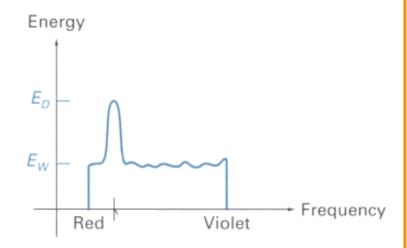

How do we represent a color in a computer?

Must store a finite amount of data to represent magnitudes for infinite number of frequencies

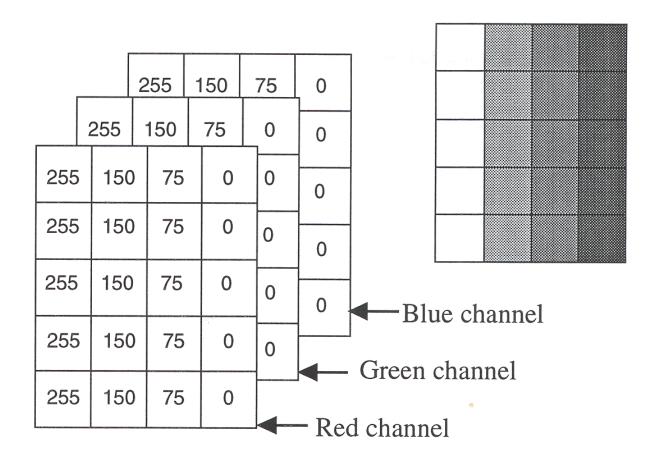

White Light

Orange Light

Color Frame Buffer

Frame Buffer Display

- Video display devices
 - Liquid Crystal Display (LCD)
 - Plasma panels
 - Thin-film electroluminescent displays
 - Light-emitting diodes (LED)
- Hard-copy devices
 - Ink-jet printer
 - Laser printer
 - Film recorder
 - Electrostatic printer
 - Pen plotter

Frame Buffer Display

Example: liquid crystal display (LCD)

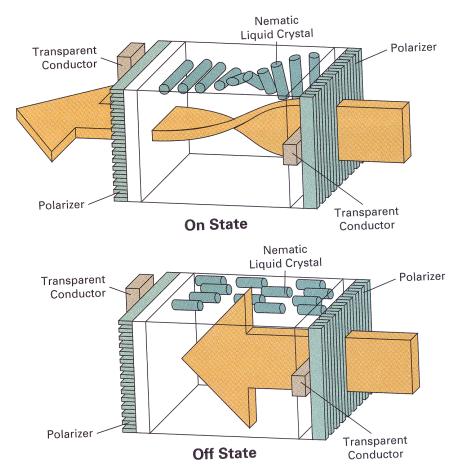

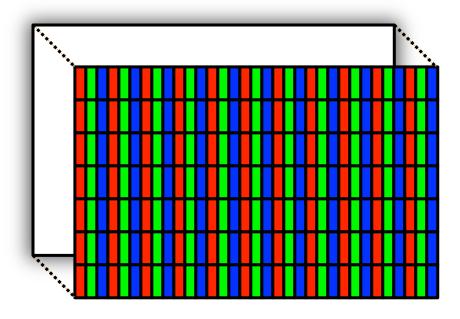

Figure 2.16 from H&B

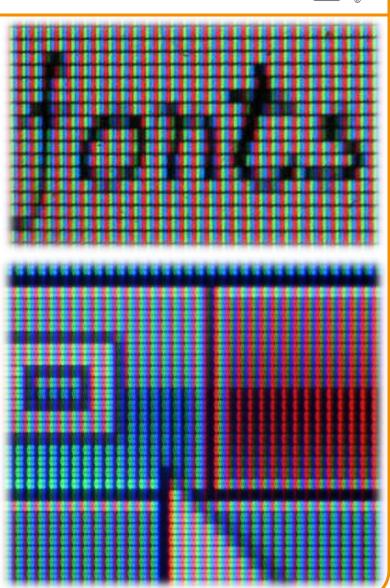

Frame Buffer Display

LCD up close

Colors are interleaved

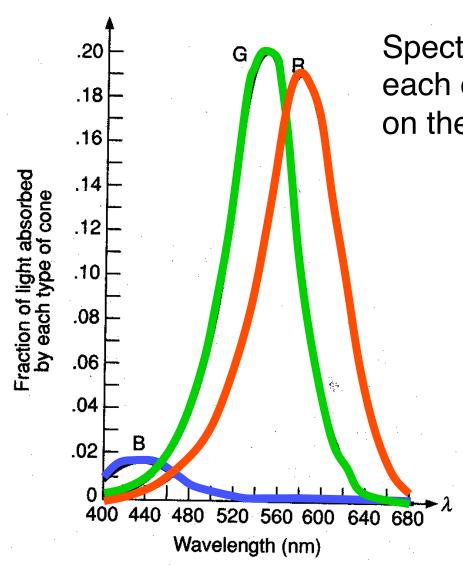

Color

Why red, green, and blue (RGB)?

Human Color Perception

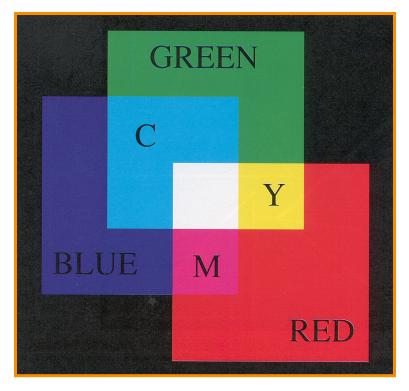

Spectral-response functions of each of the three types of cones on the human retina.

Tristimulus theory of color

Figure 13.18 from FvDFH

RGB Color Model

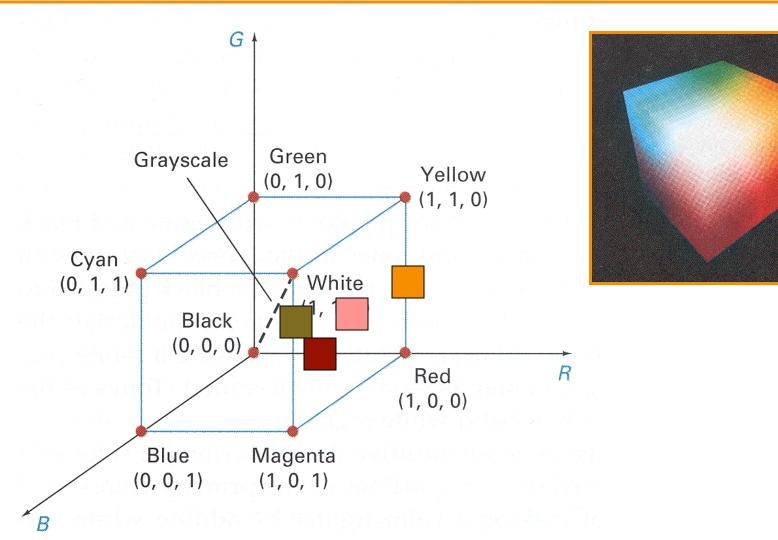

Colors are additive

R	G	В	Color
0.0	0.0	0.0	Black
1.0	0.0	0.0	Red
0.0	1.0	0.0	Green
0.0	0.0	1.0	Blue
1.0	1.0	0.0	Yellow
1.0	0.0	1.0	Magenta
0.0	1.0	1.0	Cyan
1.0	1.0	1.0	White
0.5	0.0	0.0	?
1.0	0.5	0.5	?
1.0	0.5	0.0	?
0.5	0.3	0.1	?

Plate II.3 from FvDFH

RGB Color Cube

Figures 15.11&15.12 from H&B

Other Color Models

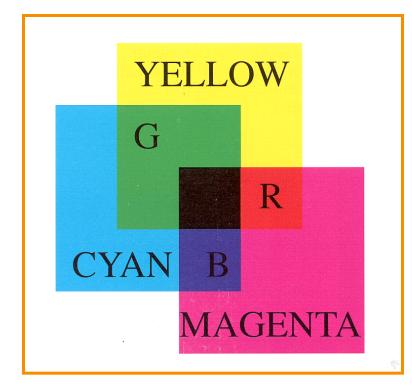

- CMY
- HSV
- XYZ
- La*b*
- Others

Different color models are useful for different purposes

CMY Color Model

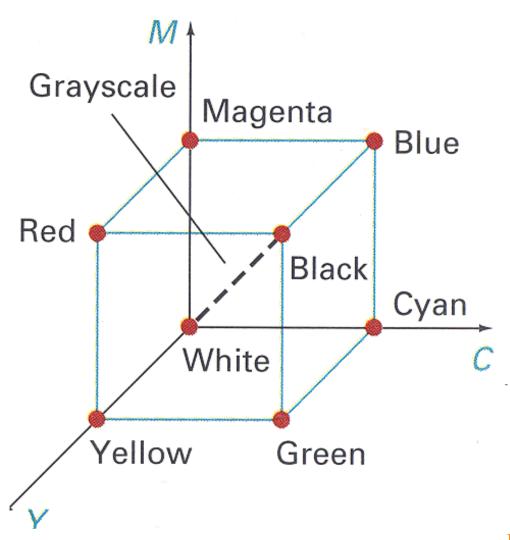

Useful for printers because colors are subtractive

C	M	Y	Color
$\overline{0.0}$	0.0	0.0	White
1.0	0.0	0.0	Cyan
0.0	1.0	0.0	Magenta
0.0	0.0	1.0	Yellow
1.0	1.0	0.0	Blue
1.0	0.0	1.0	Green
0.0	1.0	1.0	Red
1.0	1.0	1.0	Black
0.5	0.0	0.0	
1.0	0.5	0.5	
1.0	0.5	0.0	

Plate II.7 from FvDFH

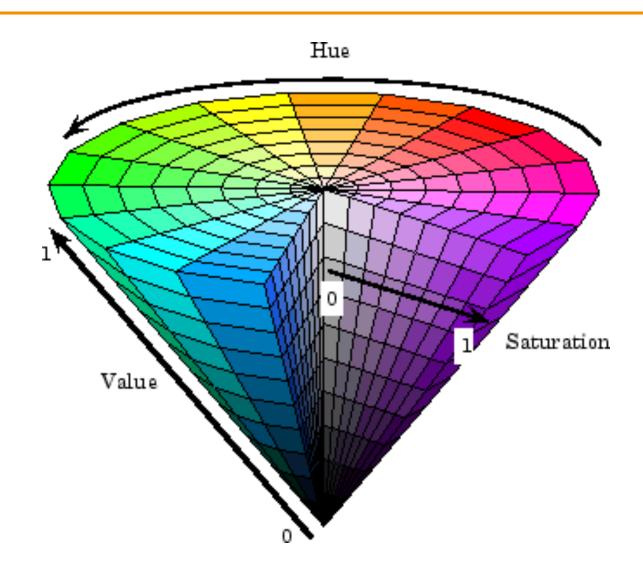

CMY Color Model

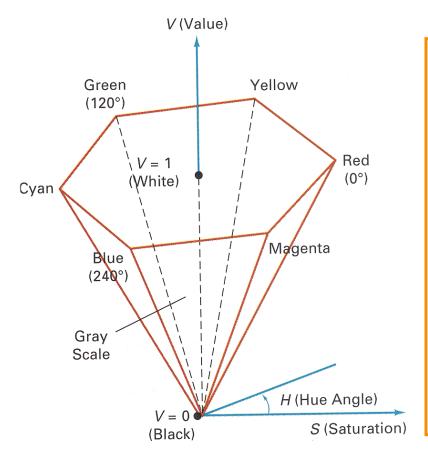

HSV Color Model

HSV Color Model

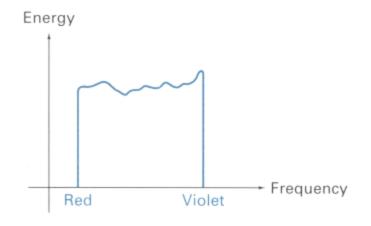

Н	S	V	Color
0	1.0	1.0	Red
120	1.0	1.0	Green
240	1.0	1.0	Blue
*	0.0	1.0	White
*	0.0	0.5	Gray
*	*	0.0	Black
60	1.0	1.0	
270	0.5	1.0	
270	0.0	0.7	

Useful for user interfaces because dimensions are intuitive

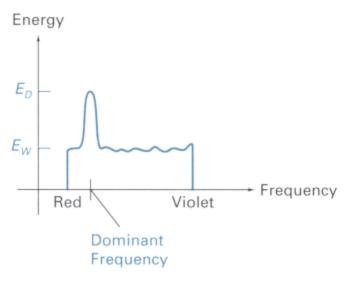

HSV Color Model

- HSV interpretation in terms of color spectrum
 - Hue = dominant frequency (highest peak)
 - Saturation = excitation purity (ratio of highest to rest)
 - Value = luminance (area under curve)

White Light

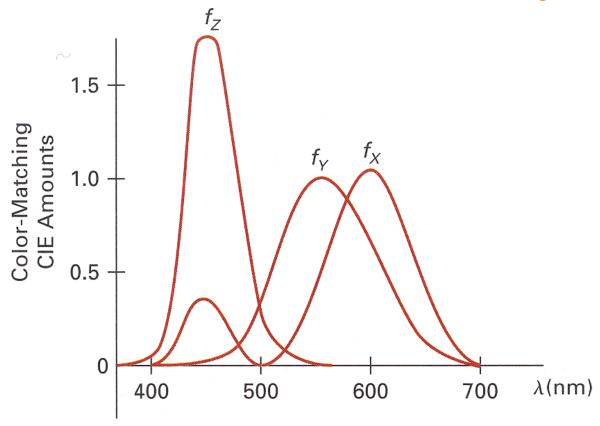

Orange Light

Figures 15.3-4 from H&B

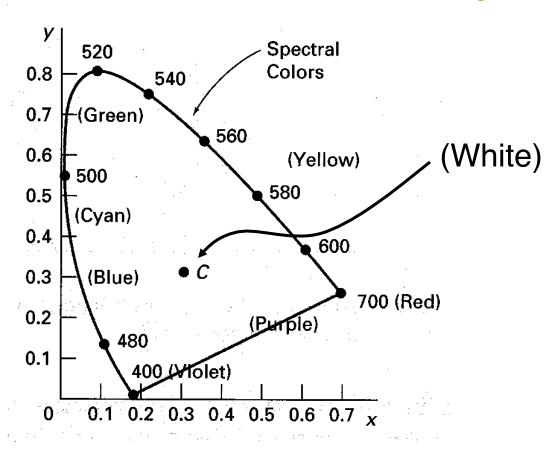

Figure 15.6 from H&B

Derived from perceptual experiments
All spectra that map to same XYZ give same visual sensation

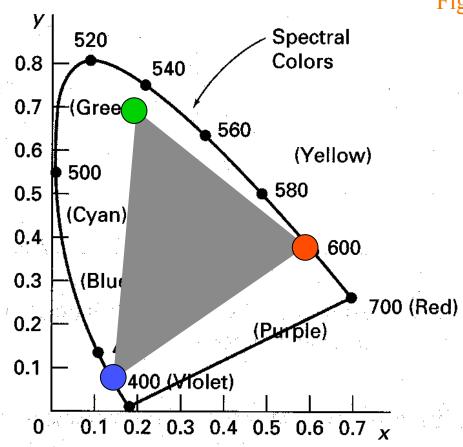

Figure 15.7 from H&B

Normalized amounts of X and Y for colors in visible spectrum

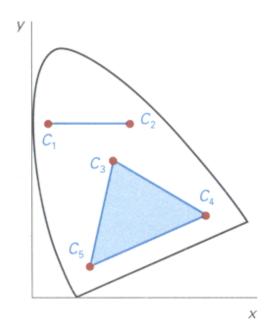

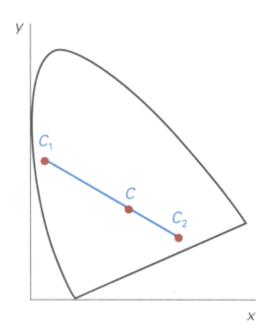

Useful for reasoning about coverage of color gamuts

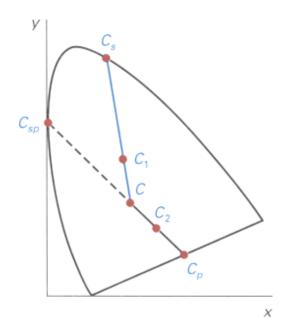

Figures 15.8-10 from H&B

Compare Color Gamuts

Identify Complementary Colors

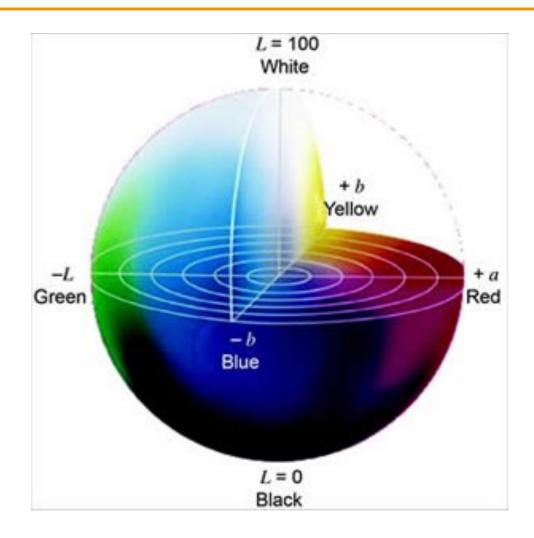

Determine
Dominant Wavelength
and Purity

Useful for characterizing perceptual qualities of colors

La*b* Color Model

Non-linear compression of XYZ color space based on perception

Useful for measuring perceptual differences between colors

Summary

- Images
 - Pixels are samples
 - Photographs sample plenoptic function

Colors

- Tristimulus theory of color
- Different color models for different devices, uses, etc.
- RGB model is common due to human perception
- CIE Chromaticity Diagram

Next time
