Leader Election

0	currentTerm	0
	votedFor	-1
	commitIndex	0
	lastApplied	0
	nextIndex	[]
	matchIndex	[]
(log entries here)		

Logs are 1-indexed

currentTerm latest term server has seen

votedFor candidate ID that received vote in current term, or -1 if none

commitIndex index of highest log entry known to be committed

lastApplied index of highest log entry applied to state machine

(Only on leader)

nextIndex for each server, index of the next log entry to send to that server

matchIndex for each server, index of highest log entry known to be replicated on the server

0	currentTerm	0
	votedFor	-1
<empty>		

currentTerm latest term server has seen

votedFor candidate ID that received vote in current term,
or -1 if none

State required for election

Recap: Leader Election

Everyone sets a randomized timer that expires in $[T, 2T]$ (e.g. $T = 150\text{ms}$)

When timer expires, increment term and send a RequestVote to everyone

Retry this until either:

- You get majority of votes (including yourself): become leader

- You receive an RPC from a valid leader: become follower again

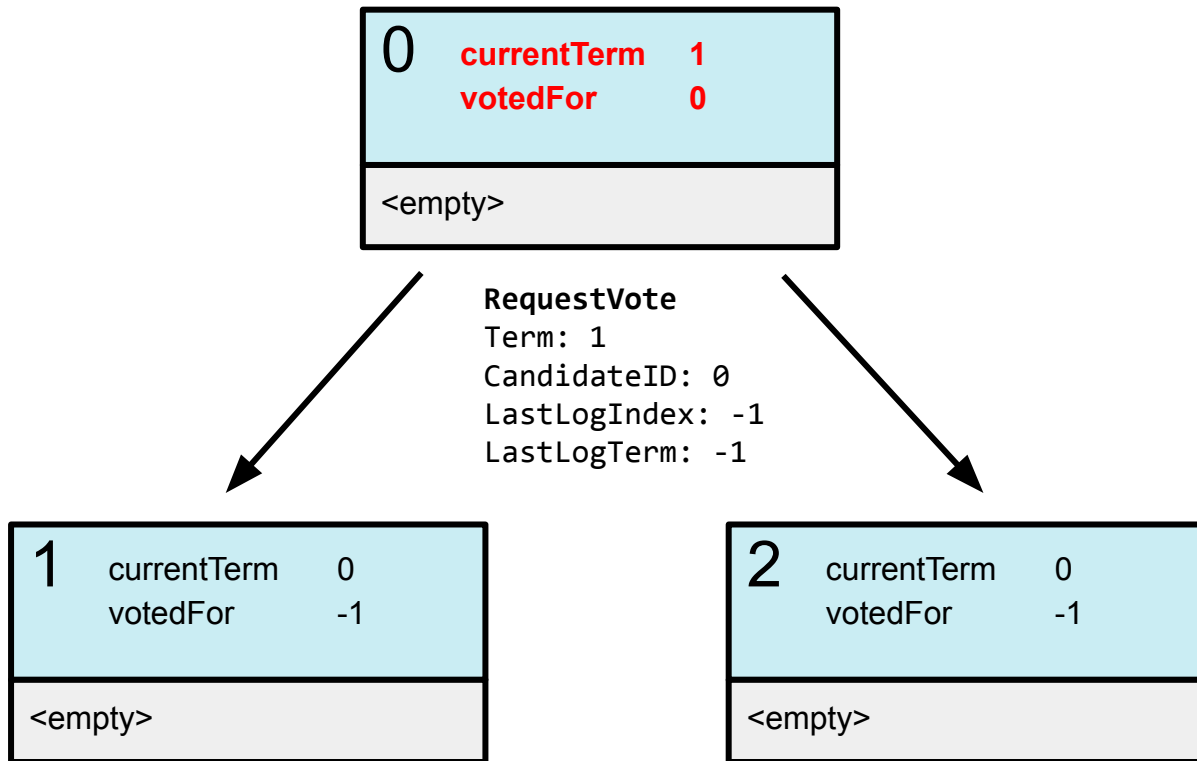

Scenario 1: During System Bootup

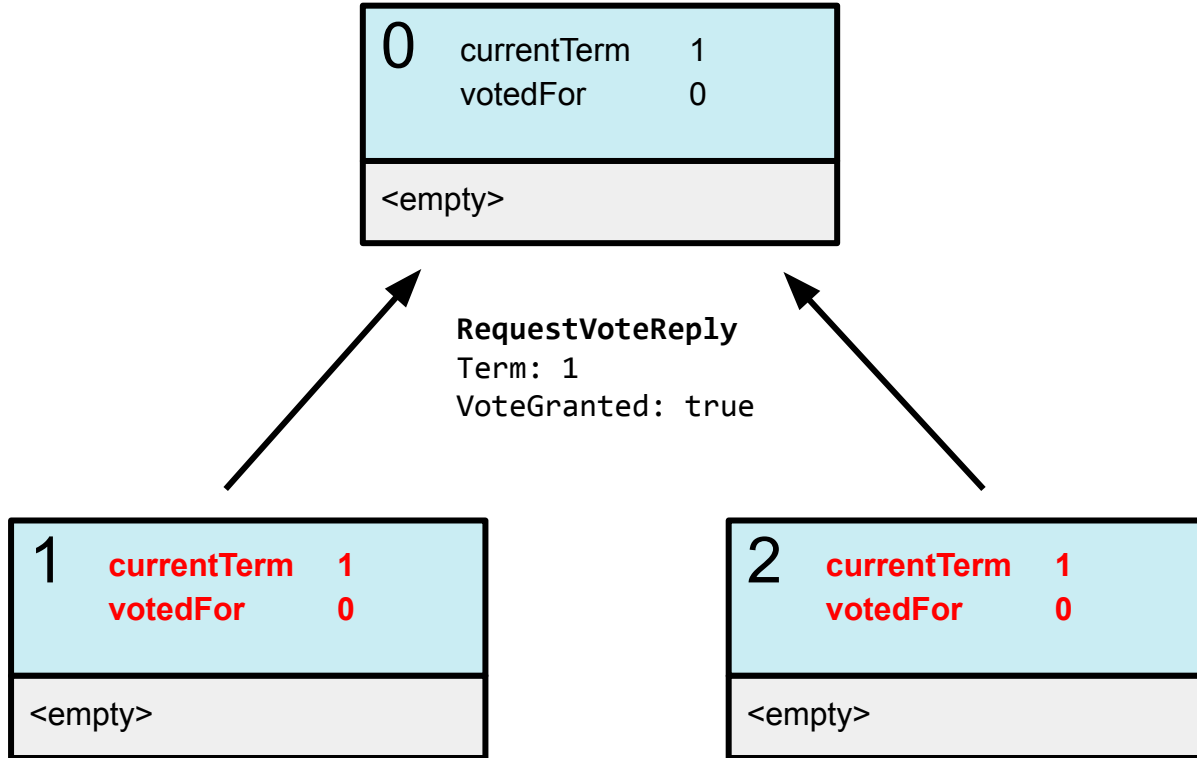

0	currentTerm	0
	votedFor	-1
<empty>		

Timeout

1	currentTerm	0
	votedFor	-1
<empty>		

2	currentTerm	0
	votedFor	-1
<empty>		

0	currentTerm	1
	votedFor	0
<empty>		

1	currentTerm	1
	votedFor	0
<empty>		

2	currentTerm	1
	votedFor	0
<empty>		

Scenario 2: During Normal Execution

(suppose there are existing log entries...)

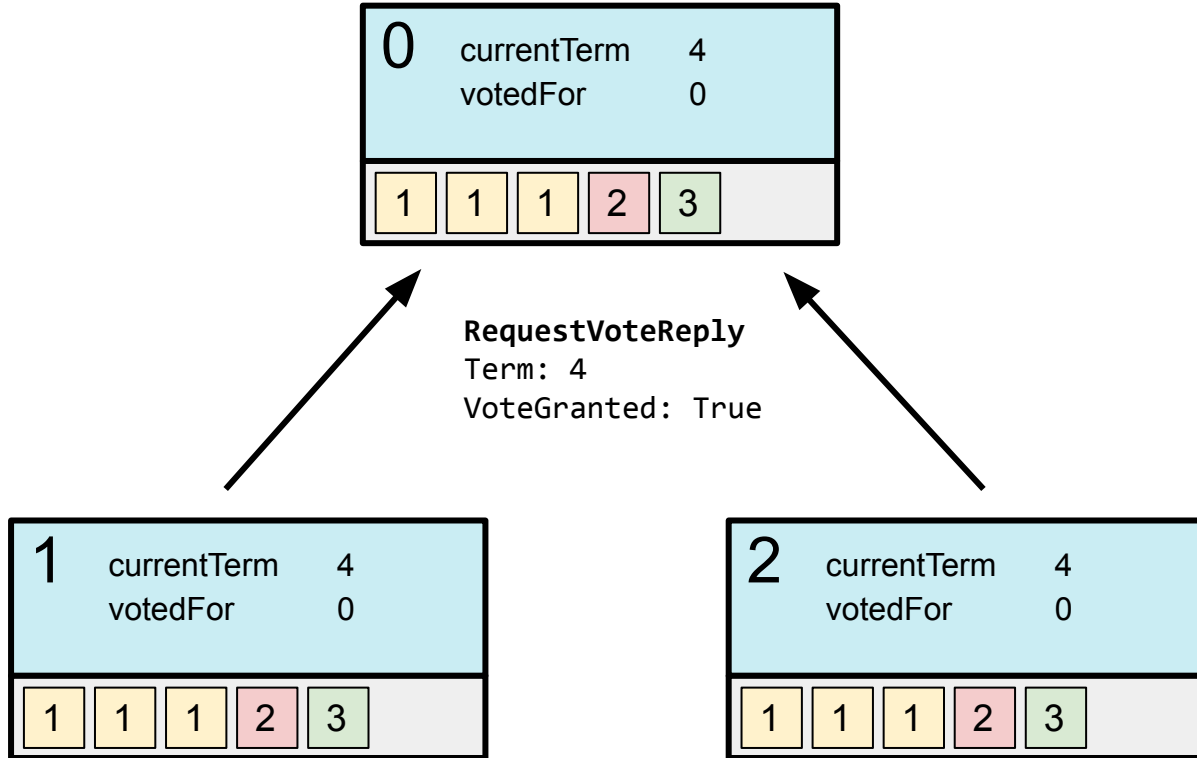

Timeout

RequestVote
Term: 4
CandidateID: 0
LastLogIndex: 5
LastLogTerm: 3

0	currentTerm	4			
	votedFor	0			
1	1	1	2	3	

1	currentTerm	4			
	votedFor	0			
1	1	1	2	3	

2	currentTerm	4			
	votedFor	0			
1	1	1	2	3	

Conditions for granting vote

1. We did not vote for anyone else in this term
2. Candidate term must be \geq ours
3. Candidate log is at least as *up-to-date* as ours
 - a. The log with **higher term** in the last entry is more up-to-date
 - b. If the last entry terms are the same, then the **longer** log is more up-to-date

Which one is more *up-to-date*?

Which one is more *up-to-date*?

Which one is more *up-to-date*?

Why reject logs that are not *up-to-date*?

Leader log is always the ground truth

Once someone is elected leader, followers must throw away conflicting entries

Must NOT throw away committed entries!

Note: Log doesn't need to be the MOST up-to-date among all servers

What if we accept logs that are not as
up-to-date as ours?

	1	2	3	4	5	
S0	1	1	1	2	3	
S1	1	1	1	2	3	
S2	1	1	1	2	3	
 S3	1	1	1			
S4	1	1	1	1	1	1

Suppose entries 4-5 have already been committed

Then previous leader S0 crashes and S3 times out

If S3 becomes leader then committed entries 4 and 5 may be overwritten!

	1	2	3	4	5
S0	1	1	1	2	3
S1	1	1	1	2	3
 S2	1	1	1	2	3
S3	1	1	1		
S4	1	1	1	1	1

Why is it OK to throw away these entries?

If these entries had been committed, then it means they must exist on a majority of servers

In that case S4 could receive votes from the same majority and become a valid leader

	1	2	3	4	5
S0	1	1	1	2	3
S1	1	1	1	2	3
 S2	1	1	1	2	3
S3	1	1	1	2	3
S4	1	1	1	2	3

When log entries don't match...

When log entries don't match...

- The leader will find the latest log entry in the follower where the two logs agree
- At the follower:
 - Everything after that entry will be deleted
 - The leader's log starting from that entry will be replicated on the follower

Optimization to reduce
number of messages?

Key Idea

- Reduce the number of rejected AppendEntries RPCs
- One RPC per conflicting **term**, rather than one RPC per conflicting entry

Detailed Algorithm:

- When rejecting an AppendEntries request, the follower can include the term of the conflicting entry and the first index it stores for that term.
- With this information, the leader can decrement nextIndex to bypass all of the conflicting entries in that term.
- See page 7-8 in [Raft \(extended version\)](#)

AppendEntriesReply
 Term: 5
 Success: False
ConflictTerm: 2
ConflictFirstIndex: 4

Specify the term of the conflicting term and the first index of this term

0	currentTerm	5
	votedFor	1
	commitIndex	5
	lastApplied	5
	nextIndex	[]
	matchIndex	[]
	[1 1 1 3 4]	

1	currentTerm	5
	votedFor	1
	commitIndex	5
	lastApplied	5
	nextIndex	[6, 6, 4]
	matchIndex	[5, 5, 0]
	[1 1 1 3 4]	

2	currentTerm	5
	votedFor	-1
	commitIndex	3
	lastApplied	3
	nextIndex	[]
	matchIndex	[]
	[1 1 1 2 2 2]	

AppendEntries
 Term: 5
 LeaderID: 1
 PrevLogIndex: 3
 PrevLogTerm: 1
 LeaderCommit: 5

[3 | 4]

Leader sends its log entries that are different from the follower's starting the specified conflicting term

0	currentTerm	5
	votedFor	1
	commitIndex	5
	lastApplied	5
	nextIndex	[]
	matchIndex	[]

1	currentTerm	5
	votedFor	1
	commitIndex	5
	lastApplied	5
	nextIndex	[6, 6, 6]
	matchIndex	[5, 5, 5]

2	currentTerm	5
	votedFor	-1
	commitIndex	5
	lastApplied	5
	nextIndex	[]
	matchIndex	[]

Key Idea:
Decrement nextIndex
one term at a time

Conditions for committing an entry

1. The entry exists on a majority AND it is written in the current term
2. The entry precedes another entry that is committed

Caveat for committing old entries

Can't assume an old entry has been committed *even if* it exists on a majority

S1 is the leader

Caveat for committing old entries

Can't assume an old entry has been committed *even if* it exists on a majority

S1 crashes,
S5 becomes leader

Caveat for committing old entries

Can't assume an old entry has been committed *even if* it exists on a majority

S1.log[2] is now replicated to a majority

S5 crashes,
S1 becomes leader

Caveat for committing old entries

Can't assume an old entry has been committed *even if* it exists on a majority

S1 crashes,
S5 becomes leader

Caveat for committing old entries

Can't assume an old entry has been committed *even if* it exists on a majority

Entry 2 was overwritten
even though it was
replicated on a majority!

**Cannot assume entry 2
was committed**

Caveat for committing old entries

Can't assume an old entry has been committed *even if* it exists on a majority

Entry 2 is committed once
entry 3 is committed

**Commit old entries
indirectly**

S1 commits entry 3

Exercise...

Exercise...

Rules for deciding which log is more up-to-date:

- Compare **index** and **term** of last entries in the logs
- If the terms are different: log with **later term is more up-to-date**
- If the terms are the same: **longer log is more up-to-date**

Q1: Is this a possible configuration?

	1	2	3	4	5
S0	1	1	2	3	
S1	1	1	2	3	
S2	1	1	2	3	
S3	1	1			
S4	1	1	1	1	1

S0	1	1	2	3	
S1	1	1	2	3	
S2	1	1	2	3	
S3	1	1			
S4	1	1	1	1	1

Q2: Is this a possible configuration?

	1	2	3	4	5
S0	1	1	2	3	
S1	1	1	2	3	
S2	1	1	2	3	
S3	1	1	4		
S4	1	1	1	1	1

NO!

S3 cannot become leader in term 4
(Who's going to vote for him?)

Q3: Is this a possible configuration?

	1	2	3	4	5
S0	1	1	5	6	
S1	1	1	5	6	
S2	1	1	5	6	
S3	1	1	4		
S4	1	1	1	1	1

Yes

What happened to terms 2 and 3?

1. Split vote: no one became leader
2. Partitions: no one became leader
3. Simply no requests in these terms

Q4: Is this a possible configuration?

	1	2	3	4
S0	1	1		
S1	1	1	1	3
S2	1	1	3	

NO!

Let's try tracing the steps...

Q4: Is this a possible configuration?

	1	2	3	4
S0	1	1		
 S1	1	1	1	
S2	1	1		

	1	2	3	4
S0	1	1		
S1	1	1	1	3
S2	1	1	3	

Q4: Is this a possible configuration?

No one becomes leader in term 2...

Q4: Is this a possible configuration?

	1	2	3	4
S0	1	1		
S1	1	1	1	
 S2	1	1	3	

	1	2	3	4
S0	1	1		
S1	1	1	1	3
S2	1	1	3	

Q4: Is this a possible configuration?

	1	2	3	4
S0	1	1		
S1	1	1	1	
S2	1	1	3	

	1	2	3	4
S0	1	1		
S1	1	1	1	3
S2	1	1	3	

Q4: Is this a possible configuration?

	1	2	3	4
S0	1	1		
 S1	1	1	1	4
 S2	1	1	3	

	1	2	3	4
S0	1	1		
S1	1	1	1	3
S2	1	1	3	

**S0 previously voted for S2 in term 3
S0 can only vote for S1 for term 4!**

Q4: Is this a possible configuration?

	1	2	3	4
S0	1	1		
S1	1	1	1	3
S2	1	1	3	

The two entries in term 3 are in different positions

S1 and S2 could not have written these entries without being leaders

But they can't both be leaders in the same term!

Q5: Is entry 2 (term 2) guaranteed to be committed?

	1	2
S0	1	2
S1	1	2
S2	1	2
S3	1	
S4	1	

Yes!

Entry 2 is on a majority of nodes

No one else has a more *up-to-date* log

Q6: Is entry 3 (term 2) guaranteed to be committed?

	1	2	3
S0	1	1	2
S1	1	1	2
S2	1	1	2
S3	1	3	
S4	1		

NO!

S3 could become leader if S0 crashes

Entry 3 is an entry from an old term
(See Figure 8 in Raft paper)

Q7: Is entry 3 (term 2) guaranteed to be committed?

	1	2	3	4
S0	1	1	2	4
S1	1	1	2	4
S2	1	1	2	
S3	1	3		
S4	1			

NO!

S3 could still become leader if S0 crashes
(votes from S2, S3 and S4)

Q8: Is entry 3 (term 2) guaranteed to be committed?

	1	2	3	4
S0	1	1	2	4
S1	1	1	2	4
S2	1	1	2	
S3	1	3		
S4	1	1	2	4

Yes!

Entry 4 is guaranteed to be committed
because no one else has a more
up-to-date log

All entries before entry 4 are safe
